出版者:Springer

出版时间:2005-08-16

装帧:Hardcover

isbn:9780387243566

The concept of content delivery has become increasingly more important due to rapidly growing demands for efficient distribution and fast access of information from the Internet. The content can be diverse and broad-ranging, and the desire to facilitate ubiquitous information access demands varied network architectures and hardware devices. The need to deliver quality information - given the nature of the content, network connections and client devices - introduces various challenges for content delivery technologies. Web Content Delivery offers the most comprehensive coverage of state-of-the-art research, providing insightful and thought-provoking possibilities for the future of web applications. Written by leading international researchers, the book focuses on web content delivery, dynamic web content, streaming media delivery and ubiquitous web access. Web Content Delivery is an essential reference for both academic researchers and industrial practitioners.
