出版者:Hyx

出版时间:2015-6-5

装帧:Paperback

isbn:9782910385767

The eponymous catalogue for an exhibition by Swiss architects Gramazio & Kohler in collaboration with systems engineer Raffaello D'Andrea, shown at the Frac Centre in Orléans. The book presents a fascinating exploration of their perspectives and multidisciplinary interests, ranging from computational design and robots to material

innovation, plus research on architecture, system design and autonomous robotic technologies. Through detailed diagrams and texts, it gives insight into the exhibitions realisation in which an architectural installation was constructed by flying robots and reveals radical new ways of both thinking about and materialising architecture.
