Some children appear to be doing well in math until about third grade. Then, they suddenly hit a brick wall. Their confidence is shaken and they may become frustrated. In many cases, these children have relied on rote memorization, not really grasping

fundamental math skills.Count on Math was written for these children, their teachers and their parents. It was also written to give children ages 3 through 7 good experiences with math and to prevent the brick wall scenario altogether.Count on Math is a complete guide for teachers and parents offering math activities designed to develop concepts sequentially, using everyday materials. Children progress at their own pace.
