出版时间:2005-8

装帧:Pap

isbn:9789812561992

This book provides an accessible approach to the study of Windows[registered] programming with Visual C++[registered]. It is intended to be an introduction to Visual C++[registered] for technical people including practicing engineers, engineering students, and others who would like to understand Windows[registered] programming and use its inherent graphic capabilities. While the book is aimed at a technical audience, the mathematical content is modest and it should be readable by most people interested in C++ programming. Readers of this book will be introduced to Windows[registered] programming in perhaps the most natural way, by using the Visual C++[registered] object-oriented environment and the tools of the Microsoft[registered] Foundation Classes (MFC).
