Considering the ways in which the ‘global turn’ is changing the theory and practice

of historical disciplines, *Explorations in History and Globalization* engages with the concept and methodology of globalization, challenging traditional divisions of space and time to offer a range of perspectives on how globalization has affected social, economic, political and cultural history.

Each chapter covers a specific theme, discussing how globalization has shaped these themes and how they have contributed to globalization throughout history. Including topics such as ecological exchanges, trade, exchanges of knowledge, migration, empire and urbanization, this volume both explains historical trajectories through a global analytical framework and provides tools that students can employ when posing their own research questions about historical globalization.

Containing suggestions for further reading and guidance on the ways in which primary source material can be used as a basis for global historical studies, this is the ideal volume for all students interested in the global exchanges between people throughout history.
