This manual is the definitive reference for GNU Bash. Bash is a command processor that typically runs in a text window, where the user types commands that cause actions. Bash can also read commands from a file, called a script. Like all Unix shells, it

supports filename globbing (wildcard matching), piping, here documents, command substitution, variables and control structures for condition-testing and iteration. The keywords, syntax and other basic features of the language were all copied from sh. Other features, e.g., history, were copied from csh and ksh. Bash is a POSIX shell, but with a number of extensions.

即便是当做参考手册，看起来也有些晦涩。没有废话，更谈不上循循善诱，但基本上碰到的疑问都能在里面找到答案，尽管这个答案可能就是你之前都没注意过的一句话。
