Through observation and easy scientific experiments, young readers can experience how the various kinds of weather impact the earth. Each of six types of weather is profiled in two volumes. The first volume focuses on how the weather affects people,

and the second focuses on how it affects the earth. With vivid photographs, a helpful glossary, accurate charts, and informative text, this series will thrill nature lovers and burgeoning scientists Have you ever watched an exciting thunderstorm from the safety of your home and wondered what made it happen? With thunderstorms and hurricanes, tornadoes and monsoons, this insightful volume examines the different types of storms that occur, how they affect Earth, and how we measure them.
