Hands-on practice with routers and switches is critical for success on the CCNA exam, yet the costs associated with the required hardware are prohibitive to say the least. "The CCNA Virtual Lab, Gold Edition", simulates the configuration screen on a network consisting of four routers, two switches, and four hosts. (Compare to "CCNA Virtual Lab", standard edition, which supports three routers, one switch, and one host.) Users can either follow the lab exercises provided or experiment with the hundreds of configuration commands built into the simulator. An extensive help system is available to guide users through complex tasks.
