Intro Programming course is estimated currently at 150-200,000 and growing. Visual Basic is taking over where BASIC, Qbasic, and QuickBasic once dominated, in the Introductory Business Programming course. That trend will continue as VB continues

to encroach on other less progressive languages such as COBOL and the Basic variations listed above within CIS and Business departments. The courses that can be supported by this text are not specific to any one type of institution, since VB in a Business course is largely a functional topic needed by all types of students from 2-4 year, to Vo-Tech, to extended, to even adult education.
