

量子光学

[量子光学_下载链接1](#)

著者:Walls D.F.

出版者:世界图书出版社

出版时间:2016-7-1

装帧:平装

isbn:9787519205492

《量子光学(第2版)(英文版)》是量子光学领域里实验和理论分析新全面的一本教材。

作者介绍:

D. F. Walls (D.L. 沃尔斯, 新西兰)是国际知名学者, 在物理学界和光学界都享有盛誉。本书凝聚了作者多年科研和教学成果, 适用于科研工作者、高校教师和研究生。

目录: 1 Introduction	
2 Quantisation of the Electromagnetic Field	
2.1 Field Quantisation	
2.2 Fock or Number States	
2.3 Coherent States	
2.4 Squeezed States	
2.5 Two—Photon Coherent States	
2.6 Variance in the Electric Field	
2.7 Multimode Squeezed States	
2.8 Phase Properties of the Field	
Exercises	
References	
Further Reading	
3 Coherence Properties of the Electromagnetic Field	
3.1 Field—Correlation Functions	
3.2 Properties of the Correlation Functions	
3.3 Correlation Functions and Optical Coherence	
3.4 First—Order Optical Coherence	
3.5 Coherent Field	
3.6 Photon Correlation Measurements	
3.7 Quantum Mechanical Fields	
3.7.1 Squeezed State	
3.7.2 Squeezed Vacuum	
3.8 Phase—Dependent Correlation Functions	
3.9 Photon Counting Measurements	
3.9.1 Classical Theory	
3.9.2 Constant Intensity	
3.9.3 Fluctuating Intensity—Short—Time Limit	
3.10 Quantum Mechanical Photon Count Distribution	
3.10.1 Coherent Light	
3.10.2 Chaotic Light	
3.10.3 Photo—Electron Current Fluctuations	
Exercises	
References	
Further Reading	
4 Representations of the Electromagnetic Field	
4.1 Expansion in Number States	
4.2 Expansion in Coherent States.	
4.2.1 P Representation	
4.2.2 Wigner's Phase—Space Density	
4.2.3 Q Function	
4.2.4 R Representation.	
4.2.5 Generalized P Representations	
4.2.6 Positive P Representation	
Exercises	
References	
5 Quantum Phenomena in Simple Systems in Nonlinear Optics	
5.1 Single—Mode Quantum Statistics	
5.1.1 Degenerate Parametric Amplifier	
5.1.2 Photon Statistics	
5.1.3 Wigner Function	
5.2 Two—Mode Quantum Correlations	
5.2.1 Non—degenerate Parametric Amplifier	

- 5.2.2 Squeezing
- 5.2.3 Quadrature Correlations and the Einstein—Podolsky—Rosen Paradox
- 5.2.4 Wigner Function
- 5.2.5 Reduced Density Operator
- 5.3 Quantum Limits to Amplification
- 5.4 Amplitude Squeezed State with Poisson Photon Number Statistics.
- Exercises
- References
- 6 Stochastic Methods
 - 6.1 Master Equation
 - 6.2 Equivalent c—Number Equations
 - 6.2.1 Photon Number Representation
 - 6.2.2 P Representation.
 - 6.2.3 Properties of Fokker—Planck Equations.
 - 6.2.4 Steady State Solutions—Potential Conditions.
 - 6.2.5 Time Dependent Solution
 - 6.2.6 Q Representation
 - 6.2.7 Wigner Function
 - 6.2.8 Generalized P Representation
 - 6.3 Stochastic Differential Equations
 - 6.3.1 Use of the Positive P Representation
 - 6.4 Linear Processes with Constant Diffusion
 - 6.5 Two Time Correlation Functions in Quantum Markov Processes
 - 6.5.1 Quantum Regression Theorem
 - 6.6 Application to Systems with a P Representation
 - 6.7 Stochastic Unravellings
 - 6.7.1 Simulating Quantum Trajectories
- Exercises
- References
- Further Reading
- 7 Input—Output Formulation of Optical Cavities
 - 7.1 Cavity Modes
 - 7.2 Linear Systems
 - 7.3 Two—Sided Cavity
 - 7.4 Two Time Correlation Functions
 - 7.5 Spectrum of Squeezing
 - 7.6 Parametric Oscillator
 - 7.7 Squeezing in the Total Field
 - 7.8 Fokker—Planck Equation
- Exercises
- References
- Further Reading.
- 8 Generation and Applications of Squeezed Light
 - 8.1 Parametric Oscillation and Second Harmonic Generation
 - 8.1.1 Semi—Classical Steady States and Stability Analysis
 - 8.1.2 Parametric Oscillation
 - 8.1.3 Second Harmonic Generation
 - 8.1.4 Squeezing Spectrum
 - 8.1.5 Parametric Oscillation
 - 8.1.6 Experiments
 - 8.2 Twin Beam Generation and Intensity Correlations
 - 8.2.1 Second Harmonic Generation
 - 8.2.2 Experiments
 - 8.3 Applications of Squeezed Light

8.3.1 Interferometric Detection of Gravitational Radiation

8.3.2 Sub—Shot—Noise Phase Measurements

8.3.3 Quantum Information

Exercises

References

Further Reading

9 Nonlinear Quantum Dissipative Systems

9.1 Optical Parametric Oscillator: Complex P Function

9.2 Optical Parametric Oscillator: Positive P Function

9.3 Quantum Tunnelling Time

9.4 Dispersive Optical Bistability.

9.5 Comment on the Use of the Q and Wigner Representations

Exercises

9.A Appendix

9.A.1 Evaluation of Moments for the Complex P function for Parametric Oscillation (9.17)

9.A.2 Evaluation of the Moments for the Complex P Function for Optical Bistability (9.48)

References

Further Reading

10 Interaction of Radiation with Atoms

10.1 Quantization of the Many—Electron System

10.2 Interaction of a Single Two—Level Atom with a Single Mode Field

10.3 Spontaneous Emission from a Two—Level Atom.

10.4 Phase Decay in a Two—Level System

10.5 Resonance Fluorescence

Exercises

References

Further Reading

11 CQED

1.1.1 Cavity QED

1.1.1.1 Vacuum Rabi Splitting

1.1.1.2 Single Photon Sources

1.1.1.3 Cavity QED with N Atoms

1.1.2 Circuit QED

Exercises

References

Further Reading

12 Quantum Theory of the Laser

12.1 Master Equation

12.2 Photon Statistics

12.2.1 Spectrum of Intensity Fluctuations

12.3 Laser Linewidth

12.4 Regularly Pumped Laser

12.A Appendix: Derivation of the Single Atom Increment

Exercises

References

.....

13 Bells Inequalities in Quantum Optics

14 Quantum Nondemolition Measurements

15 Quantum Coherence and Measurement Theory

16 Quantum Information.

17 Ion Traps

18 Light Forces
