Written by two practising clinicians, this book is a guide for those who work with children. In clear, simple language it focuses upon some of the most common, yet often incapacitating, difficulties which are frequently encountered by young children and adolescents. After introducing and discussing different forms of therapy and treatment used in clinical work with children, the book focuses on a range of specific difficulties. Drawing upon recent research findings, and employing detailed case illustrations, it seeks to help the reader to understand the nature of each problem and offers a guide as to how the child in difficulty can best be helped. This new edition has been fully updated to include new material on conditions such as dyspraxia and ADHD. The authors also make full references to advances in the field of special education since the first edition was published, and provide a variety of sources for further reading and information. This practical book will be of particular value to those working in education, social work, health and child-care settings, and anyone else who needs to be able to recognise and help children in difficulty.
