isbn:9781565232716

Cypress knees - stumps found in swamps of the southeastern United States that protrude from the water and vary in shape, size, and colour - are the subject matter of this carving guide. Known for their excellent carving properties, cypress knees and their

history are discussed as well as carving preparations and alternative options for those without access to this Gulf Coastal wood. Other chapters cover methods of pattern preparation and how to individualise carvings according to the unique, natural shape of each piece of wood. Readers will also benefit from a section on troubleshooting and step-by-step demonstrations on how to carve a wood spirit, Santa's face, and an elf.
