Sarah Susanka's first three books have launched a revolution in residential architecture with the message that it's not the size of the house that matters, but the quality of its design and details. Her books strike a chord in homeowners, who are finding that bigger doesn't necessarily mean better. Now, in "Home by Design, Susanka presents 30 design concepts that can transform any house into a welcoming home filled with character, beauty, and comfort. Opening readers' eyes to what's possible, she makes spatial design accessible to the layperson. Each of the design concepts here, from entryways to public/private space to window positioning, is illustrated with examples from houses by leading architects. Homeowners will learn how to assess their environment to discover what works or doesn't, and find the necessary tools to create the homes they really want.
