出版时间:2007-01-01

装帧:Hardcover

isbn:9781596680258

A growing number of the 500,000 beaders in the U.S. are deciding to go beyond simple stringing and bead crafting into the realm of more sophisticated metal jewelry. The techniques are simple, the tools affordable, and the space requirements small- a kitchen table will do. Getting Started Making Metal Jewelry is the ideal introduction. Master teacher Mark Lareau offers practical advice on equipping a home workshop, and demystifies such basics as cutting, soldering, buffing, stamping, and wirework. Along the way, he gives step-by-step instructions for metalwork projects designed to

help the reader build skills while creating beautiful designs. Pendants, earrings, bracelets, rings, and chains in styles from contemporary and funky to classic and elegant are presented, and the reader is encouraged to expand her own creativity and personal style. The primary competition for this book is expensive, arty, and short on practical instruction for the beginner. Getting Started Making Metal Jewelry is packed with clear, explicit step-by-step photographs that make learning easy and success likely.
