This incredible, interactive skywatcher's guide revolutionizes the way children learn about the cosmos. Inside the spiral-bound star atlas are amazing illustrations of the planets and constellations, fascinating, fact-filled text, and a removable night sky globe. As they read about the stars, galaxies, and other celestial phenomena, budding astronomers can locate them on the globe for a thorough understanding of the universe. The spinning globe comes with its own stand and spindle so that it can be used and enjoyed independently of the book. Quizzes, colorful photos, and cool graphics make the learning process fun.
