Using sign language, babies everywhere are successfully communicating their needs and desires even before they can talk. They are jump-starting their communications and language skills while deepening parent-child bonds. With this adorable board

book of simple signs, created by a leading expert in the field who runs her own school in Manhattan, parents can take advantage of a major new trend—one that's become so popular it was profiled by The New York Times. on every page, cute babies demonstrate the gestures that mean Mommy , Daddy , love , dog , cat , home , sleep , tired , hungry , music , milk , and banana . And because babies very much like looking at photos of other babies, they'll have fun even as they learn.

The author lives in New York, NY.
