出版者:Facts on File

出版时间:2006-1

装帧:LIB

isbn:9780791090084

Give readers an up-close look at planet Earth, and its solar system. From the origin of the universe to the international space station--OUR PLANET explores the Sun, the Moon, lunar and solar eclipses, and more! The well-written text is accompanied by vivid, full-color illustrations, and the nonfiction features include an end-of-book glossary and "Interesting Facts and Figures," both of which aid readers in understanding the subject, and will prove useful when using the books in school reports and presentations. This series meets middle school science curriculum standards.
