Through observation and easy scientific experiments, young readers can experience how the various kinds of weather impact the earth. Each of six types of weather is profiled in two volumes. The first volume focuses on how the weather affects people, and the second focuses on how it affects the earth. With vivid photographs, a helpful

glossary, accurate charts, and informative text, this series will thrill nature lovers and burgeoning scientists How and why do storms develop? What happens when a storm is so big that it destroys crops, roads, boats, and buildings? This title looks specifically at areas prone to heavy storms, the people who help those in the path of destruction, and the particular dangers posed to farmers.
