It's not your imagination: Earth is getting warmer. Global warming is perhaps the most prominent environmental issue of the past decade. Award-winning writer Laurence Pringle describes the causes of this worldwide trend, exploring its past, present, and potential future damage to our climate, ecology, and economy. He also offers practical solutions that will help avert a global disaster of our own making. With over thirty striking color photographs, here is an incisive, clear, authoritative look at a timely topic that all children and adults must face and soon.
