What's the cure for a wet, rainy day? Imagination, of course A young child discovers how to make an ordinary day extraordinary with just a few strokes of color from a box of crayons. As he draws, he knows that blue is the color of rainfall, but it's also the hue of the ocean, where schools of rainbow fish swim. A green crayon creates a jungle and

a small friendly lizard, while yellow is perfect for a flowery meadow on a sunny day. With each stroke of color comes another brightly rendered discovery, until at last a million white stars in the night sky provide the perfect backdrop for a silver spaceship heading towards Mars. Vividly illustrated and cheerfully told, this delightful picture book will undoubtedly inspire young readers to use their own imagination kits on the next rainy day to color a journey of their own
