This BIG title removes the confusion of the abstract by teaching size through eye-catching juxtaposition in "oh wow!" images. For instance, any idea about the size of the mysterious Giant Squid of the deep? Sure, you could read that it's 59.5 ft. long. While that sounds impressive enough, it's a little abstract. However, when you see a full-color illustration of a Giant Squid placed in front of the entire length of a farmhouse, you get a real idea of what 59.5 feet means!
