Structural Models of Wage and Employment Dynamics" contains selected papers from a conference held in honour of Professor Dale T. Mortensen upon the occasion of his 65th birthday. The papers are on some of Professor Dale T. Mortensen's current research topics: the development of equilibrium dynamic models designed to account for wage dispersion and the time series behaviour of job and worker flows. The conference is the sixth in a series. From the beginning there has been a close interplay among economic theorists, econometricians, and applied economists. This book also has a section with theoretical papers as well as sections with micro- and macro-econometric papers. These conferences have had significant influence on how we think about public policy in the labour market, and what kinds of data would be needed to answer questions about these policies. Contributions to Economic Analysis was established in 1952. The series purpose is to stimulate the international exchange of scientific information. The series includes books from all areas of macroeconomics and microeconomics.

书评

劳动力市场的动态均衡分析，庆祝搜寻方法的奠基人莫腾森的生日。很多名家都参加了这次研讨会，都是行家写的文章，当然有看头了。不仅有理论，还有微观计量、宏观计

量的介绍，推荐！不过好像只有一般学校的图书馆才有哦。
