出版时间:2005-4-4

装帧:Hardcover

isbn:9780415267571

Completely revised and updated, Evaluation of Human Work is a compendium of ergonomics methods and techniques that is both broad and deep. The editors have once again brought together a team of world-renowned experts and created a forum for them to introduce their most valued techniques and methods. Almost every chapter has been revised and several new chapters have been added. See what's new in the Third Edition: Sociotechnical design of work systems Team design and evaluation Learning from failures through a joint cognitive systems perspective The Analysis of organizational processes Techniques in user-centered design Increased understanding of the nature of knowledge and knowledge management in contemporary systems Environment surveys Systems for near miss reporting and analysis The one thing that has remained unchanged from the first and second editions is that this text is produced NOT as a cookbook of ergonomics methods. The editor places ergonomics methodology in context, and each chapter carefully describes the background to method development in that area and the application of methods and tools. Exploring the topic of ergonomics/human factors from a 'doing it' perspective, the book serves as a guide to what ergonomics can offer industry, business, or human service professionals and a reference for practicing ergonomists.
