Imagine a safer and more efficient fireground without the expense of the latest equipment or technical training. Crew Resource Management for the Fire Service aims to reduce injuries and fatalities on the fireground by preventing human error. This book will provide fire service professionals with the necessary communication, leadership, and decision-making tools to operate safely and effectively under stressful conditions, thereby reducing injuries and deaths on the emergency scene. Although the concept of crew resource management has been around since the 1970s, this is the first book to apply CRM to the fire service industry. CRM emphasizes that in most cases technology isn't the root cause of catastrophe -- human error is the culprit. Therefore steps taken to minimize the impact of errors are the keys to reducing the magnitude of the inevitable human failing. This book will be valuable for college classes, and may be used internationally by the fire service, emergency medical service
