Gendering the Knowledge Economy demonstrates the ways in which gender transforms the understanding of the knowledge-based economy, addressing the nature of knowledge and what constitutes the newness of current employment forms. It rethinks the processes of both de-gendering and re-gendering of working practices in the context of both the deregulation and re-regulation of employment. A comparative analysis of the US, UK, Germany and Japan underpins the rethinking of the varieties of capitalism and the comparative analysis of gender relations.
