Driven by the need and desire to reduce costs, organizations are faced with a set of decisions that require analytical scrutiny. "Designing State-of-the-Art Data Centers" examines cost-saving trends in planning, administration, and management. To establish a framework for discussion, this book begins by evaluating the role of Enterprise Architecture planning and Service Oriented modeling. The text presents an assessment of storage technologies and networking as well as addresses regulatory and security issues. Additional coverage includes high-speed communication mechanisms such as Ethernet, WAN and Internet communication technologies, broadband communications, and chargeback models.
