isbn:9780761935452

This book critically examines recent trends in India's labour force and workforce participation rates. The author places special emphasis on the casualization, feminization and informalization of labour. The decline in the workforce participation rate noted in the post-reform period is explained by an increase in the student population ratio as well as by a deceleration in the growth rate of the working age population. In conclusion, the book highlights the emerging employment opportunities created by information technology.
