In the coming decades, East Asian economies must face the challenges of an increasingly globalized marketplace. This book explores the changing parameters of competition in East Asia, and argues that success ultimately will depend on the ability of the regions firms to harness the potential of global production networks and to build their own innovative capability. Presenting the latest findings on global production networks and the evolution of technological capabilities, it provides researchers, students, and policymakers with in-depth information and analysis on key issues related to growth and development in East Asia.
