This book explores the perceived paradigmatic conflict within British classical

economics between the so called 'Ricardo School' and the contemporary French Economics of Jean-Baptiste Say. Samuel Hollander provides the reader with extensive evidence, utilising all editions of Say's main texts and his lesser-known writings, in order to demonstrate Say's adherence to much of Ricardian theory. The book focuses on selected doctrinal issues and the surrounding debates including: \* value and distribution with extension to growth theory \* real income and its measurement with implications for trade and taxation \* 'Law of Markets' This intriguing book will interest all serious historians of economic thought and will find a place on the bookshelves of many economists across the world.
