This is a comprehensive analysis of the economics of international aid that provides a systematic framework for understanding, planning, and executing aid programs. Though much has been written on different aspects of international aid, this book was the first to synthesize information on all facets of aid and to investigate the consequences, for both donor and recipient nations, of the transfer of public resources in aid programs. Though originally published in the mid-1960s, this book continues to have considerable influence and its interest outlasts its parochial times.
