The book explores the crisis that secular-nationalism went through with the emergence of what is loosely called identity politics. With the rise of new political assertions on the one hand and sectarian tendencies on the other, the fundamentally Hindu assumptions of Nehruvian secular-nationalism were revealed. Its search for a homogeneous national culture has led it to produce the dominant culture as the norm and marginalize the minority. It also looks at the opportunism of minority cultures and suggests this might be the result of nationalism, especially post-colonial. The book suggests that only by looking beyond the nation form in post-national directions can a modern political community be conceived of.
