出版者:Esri Press

出版时间:2006-9-1

装帧:Paperback

isbn:9781589481428

This look at complex environmental challenges and their increasingly sophisticated technological solutions explores case studies of the most innovative geographic information system (GIS) projects yet devised by governments, businesses, and individuals. Each study showcases GIS solutions, yet balances the technology with practical human applications. Topics ranging from biodiversity and pollution to specific subjects such as coastal zone management and change detection make this text relevant for nontechnical audiences and GIS professionals alike.
