Emotion research has become a mature branch of psychology, with its own standardized measures, induction procedures, data-analysis challenges, and sub-disciplines. During the last decade, a number of books addressing major questions

in the study of emotion have been published in response to a rapidly increasing demand that has been fuelled by an increasing number of psychologists whose research either focus on or involve the study of emotion. Very few of these books, however, have presented an explicit discussion of the tools for conducting research, despite the facts that the study of emotion frequently requires highly specialized procedures, instruments, and coding strategies, and that the field has reached a place where a large number of excellent elicitation procedures and assessment instruments have been developed and validated. The Handbook of Emotion Elicitation and Assessment corrects this oversight in the literature by organizing and detailing all the major approaches and instruments for the study of emotion. It is the most complete reference for methods and resources in the field, and will serve as a pragmatic resource for emotion researchers by providing easy access to a host of scales, stimuli, coding systems, assessment tools, and innovative methodologies. This handbook will help to advance research in emotion by encouraging researchers to take greater advantage of standard and well-researched approaches, which will increase both the productivity in the field and the speed and accuracy with which research can be communicated.

评论

很实用很全面的工具书，情绪领域的各路大神王婆卖瓜。实验中如果需要诱发或者评定情绪的话，这本书肯定用得着。若是不感兴趣或者不会用到的技术读起来还是挺枯燥挺费神的，拿这工具书当教材的做法就值得商榷了！如编者所言：It is a book of resources—a kind of bookshelf consultant—for the affective scientist, or for the scientist whose foray into the affective sciences may be in its beginning stages.

阅读Chapter 1 本来以为就是研究下film 选了现在的论文题目后 竟然游荡到了这个领域
