This book applies modern object relations theory-particularly the concept of intersubjectivity as articulated by Thomas Ogden-to a population for which the "treatment du jour" is increasingly cognitive-behavioral. Taking his lead from the delinquent adolescents in his practice, Dr. Brodie presents a treatment approach based on respect rather than condescension. Adolescents are related to as people, rather than as transitory objects passing through a 'stage.' Rather than judging their feelings and behaviors as "aberrant," the author views them as having emerged out of the complex matrix of his patients' lives. Adolescence and Delinquency: An Object Relations Theory Approach is less an attempt to apply object relations theory to a particular population than it is an attempt to illuminate the seamlessness of theory and application. Theory and case examples are presented in a dialectical relationship, psychological theory having no meaning other than an attempt to understand real people, and the people we work with are unintelligible outside some systematic frame of reference.
