Combining insights from both cognitive neuroscience and molecular biology, two of the world's leading experts address memory from molecules and cells to brain systems and cognition. What is memory and where in the brain is it stored? How is memory storage accomplished? This book touches on these questions and many more, showing how the recent convergence of psychology and biology has resulted in an exciting new synthesis of knowledge about learning and remembering. Memory: From Mind to Molecules is an ideal primer for courses on learning and memory or for general readers who are interested in discovering what is currently known about one of the basic aspects of human existence.

作者介绍:

Larry R. Squire is professor of psychiatry, neurosciences, and psychology at the University of California School of Medicine, San Diego, and Research Career Scientist at the Veterans Affairs Medical Center, San Diego. The author of Memory and Brain, he has

received many awards, including the Distinguished Scientific Contribution Award from the American Psychological Association and the Karl Lashey Prize from the American Philosophical Society. Eric R. Kandel founded the Center for Neurobiology and Behavior at Columbia University in New York, where he is currently University Professor and Senior Investigator at the Howard Hughes Medical Institute. The coauthor of Principles of Neural Science and In Search of Memory, he has won many prestigious awards, including the Albert Lasker Basic Medical Research Award, the National Medal of Science, the Wolf Prize in Biology and Medicine, and the Nobel Prize in Medicine.
