Capuchin monkeys are one of the most widely distributed genera of primates in Central and South America. Capuchins captivate the imagination of scientists and the lay public alike with their creative and highly variable behaviour, their grace and power

in action, and their highly developed social character. In this, the first scholarly book devoted to the biology of the genus *Cebus* (Primates: Platyrrhine), the taxonomy, distribution, life history, ecology, anatomy, development, perception, cognition, motor skills, social and sexual behaviour of these monkeys are summarised. The book also describes how humans have viewed, used and studied these monkeys from ancient times to the present. The authors explicitly organismic and inclusive treatment provides a picture in unparalleled detail of the capuchin over its lifetime for all those with an interest in these fascinating animals.

作者介绍:

DOROTHY M. FRAGASZY is Professor of Psychology and Chair of the Neuroscience and Behavior Program at the University of Georgia, USA.

LINDA M. FEDIGAN is Professor of Anthropology and Canada Research Chair at the University of Calgary, Canada.

ELISABETTA VISALBERGHI is Senior Researcher at the Istituto di Scienze della Cognizione, Consiglio Nazionale delle Ricerche in Rome, Italy.
