How do cell phones change society? How do children use computers? How can we manage relationships via text messages? The internet, television, email and other new forms of information technology are changing at a rapid pace with potentially profound but also subtle influences on social life. This book offers a succinct introduction to both the experience and implications of these information and communication technologies (ICTs) in everyday life. Drawing on a wide variety of studies from different countries, the author considers the potential, or feared, social consequences of ICTs. Throughout, he analyzes what factors are shaping the debates surrounding information and communication technologies. The outcome is a cutting-edge book that offers a fresh approach to understanding ICTs and everyday life.
