Toxocara is a parasitic helminth worm, which continues to stimulate both public concern and scientific interest. *toxocara canis* and *T. Cati* are gastrointestinal parasites of dogs and cats and their eggs can contaminate the environment, thus exposing humans and other mammals and birds to infection. Many questions remain about the host-parasite relationship, its epidemiology and public health significance. Veterinarians and clinicians are interested in its importance as a zoonosis and the parasite's capacity to enter the human eyes is of concern to ophthalmologists. This book provides a comprehensive review of *toxocara* and the disease it causes known as toxocariasis.
