At a time when much of humanity is already but one failed harvest removed from starvation, we cannot afford to ignore any potential danger to food security, especially when that danger poses a threat to rice, the staff of life for so much of the world. "Crop Fertility and Volunteerism" brings together research pioneers from various disciplines including the crop, plant, and weed sciences to discuss crop fertility and volunteerism. The book provides thorough coverage of crop and plant molecular biology and genetics as it pertains to fertility and weeds. In an exhaustive effort to provide complete and highly useful coverage of this impending crisis, the authors go beyond the science of the problem to discuss the potential economic and social impact of crop fertility, particularly in relationship to rice. Readers will discover a wealth of well-organized and well-written material about the overall biology and management of weeds and weedy crops. Many examples of fertility are considered, because, as the editor states, readers will discover that there is no unified theory of fertility. Thanks to the incredible diversity of the plant kingdom, 'Surprises abound in every chapter'.
