An updated edition of the award-winning primer on the evolution of the planet's life forms, *Prehistoric Journey* introduces readers to the wonders of the prehistoric world through an accessible text and strong, colorful photographs of world-class fossils. The book describes the history, of life on earth from the beginning of life in the seas, to the age of dinosaurs, to the age of mammals, and finally to the emergence of the modern world. Dramatic color illustrations and photographs feature the Denver Museum of Nature and Science's eight prehistoric habitat dioramas and many of the finest examples of dinosaurs, large mammals, early primates, giant fish are rendered in striking watercolor illustrations.
