出版者:Oxford Univ Pr

出版时间:1999-6

装帧:Pap

isbn:9780851992716

This text provides information on the wide variety of fruit cultivation which is found

throughout the temperate and subtropical regions of the world. This encompasses both large scale commercial operations and the activities of amateur gardeners. It is in two parts, the first examines the worldwide distribution of fruit, the effect of climate and the principles and general practices of fruit growing. In the second part, details covering all aspects of specific types of fruit are given. Written by leading experts with many years experience of researching and teaching horticulture, plant pathology, entomology and agricultural engineering, this book is reading for commercial fruit growers, students and lecturers in horticulture, and also amateurs. It should serve as a basic undergraduate text in pomology.
