The Oxford Handbook of Nucleic Acid Structure is a comprehensive reference text on all aspects of nucleic acid structure. Particular emphasis is placed on the results from X-ray crystallography and NMR studies, with both methods being given equal weight. The nineteen chapters describe in detail the variety of DNA and RNA structural types discovered to date with all the major 'native' structures being represented. The text progresses systematically through the polymorphs of double helical DNA through to the higher-order organizations of triplexes, quadruplexes, and junctions, then to RNA structures in their various degrees of complexity. Each chapter has been written by authorities in the field who have worked together to provide this comprehensive text on nucleic acid structure. The whole project has been brought together and edited by Professor Stephen Neidle who is Director of the CRC Biomolecular Structure Unit at the Institute of Cancer Research.
