Modern Design of Filters builds on the practical presentation and style of Mac Van Valkenburg's classic text, Analog Filter Design. Updated to meet the needs of today's engineering students, this text provides a practical how-to approach to modern filters. Theory and design are integrated throughout the text. Computer tools are used

consistently to minimize algebraic and other computational needs (MatLab), and to simulate "real" experimental performance and point out practical behavior (Electronics Workbench). Sample design tables and design and performance curves are also provided.
