出版时间:2004-2-6

装帧:Hardcover

isbn:9783527303441

This book not only covers reactions, products and processes with and from biological catalysts, but also the process of designing and improving such biocatalysts, taking

into account all recent insights. A unique feature is that the fields of organic chemistry, biology and bioengineering receive equal attention, such that practitioners and students from all three areas are addressed.
