By focusing on what you will need to know in the "real" world and working through exercises in Authorware 6, you will learn to create highly interactive training and educational applications for delivery across the Web, LANs, and on CD-ROMs. Everything you need to know to become a skilled user is covered in this book! You'll

begin with an orientation to the Authorware interface, icon palette and flowline to build simple presentations structures. From there, you'll jump right into building a variety of interactive learning strategies, structures to control navigation, user log-in and information tracking, reading/writing to external files, and more!
