著者:Corti, Alessio 编

出版者:OUP Oxford

出版时间:2007-6-28

装帧:Hardcover

isbn:9780198570615

This edited collection of chapters, authored by leading experts, provides a complete and essentially self-contained construction of 3-fold and 4-fold klt flips. A large part of the text is a digest of Shokurov's work in the field and a concise, complete and pedagogical proof of the existence of 3-fold flips is presented. The text includes a ten page glossary and is accessible to students and researchers in algebraic geometry.
