In the early 1960s, in a small shack on the Washington coast, a young, self-educated Japanese scientist performed an experiment to determine what made a certain jellyfish glow. The substance he discovered, green fluorescent protein, would revolutionise molecular biology, transforming our study of everything from the AIDS virus to the workings of the brain. "Aglow in the Dark" follows the path that took this

glowing compound from its inauspicious arrival on the scientific scene to its present-day eminence as one of the most groundbreaking discoveries of the 20th century.
