著者:Deutsch, Andreas (EDT)/ Bravo De La Parra, Rafael (EDT)/ De Boer, Rob (EDT)/ Diekmann, Odo (EDT)/ Jagers, Peter (EDT)

出版者:Springer Verlag

出版时间:2007-11

装帧:HRD

isbn:9780817645557

Volume II of this two-volume, interdisciplinary work is a unified presentation of a broad range of state-of-the-art topics in the rapidly growing field of mathematical modeling in the biological sciences. Highlighted throughout are mathematical and computational approaches to examine central problems in the life sciences, ranging from the organization principles of individual cells to the dynamics of large populations. The chapters are thematically organized into the following main areas: epidemiology, evolution and ecology, immunology, neural systems and the brain, and innovative mathematical methods and education. The work will be an excellent reference text for a broad audience of researchers, practitioners, and advanced students in this rapidly growing field at the intersection of applied mathematics, experimental biology and medicine, computational biology, biochemistry, computer science, and physics.
