出版者:Oxford Univ Pr

出版时间:

装帧:HRD

isbn:9781845931896

Bringing together leading researchers from around the world this book reviews how

vegetation and soils act as naturally occurring buffers which use up the gases responsible for global warming and the greenhouse effect. It provides in-depth information on the importance of these sinks, how they may respond to increased greenhouse gas emissions, how we can protect them and how they can help us mitigate climate change.
