"Automotive Air-conditioning and Climate Control Systems" is a complete text and

reference on the theoretical, practical and legislative aspects of vehicle climate control systems for automotive engineering students and service professionals. It provides the reader with a thorough up-to-date knowledge of current A/C systems, refrigerants and the new possible replacement systems like CO<sub>2</sub>, and includes unrivalled coverage of electronic and electrical control. Filling the gap in the automotive engineering and servicing market for students and those training on the job, this book will help both newcomers and those with more experience of air-conditioning systems maintenance engineering to keep up with the latest developments and legislation. This title offers detailed coverage of European and US vehicle HVAC systems. It provides thorough explanation of current and future systems including CO<sub>2</sub>. It meets relevant C&G, IMI, and HND vocational and professional qualifications. It features IMI recommended reading material. It includes practical cases studies and examples from design and manufacturing companies including Ford, Vauxhall, Toyota, VW, Visteon, Sanden and others, accompanied by over 300 detailed illustrations and photographs.
